Followup Question.

(I'm starting with U++, so please be patient.)

I have a simple GUI_APP with a layout file that contains the main window layout and a (what I hope to be able to see one day) a second layout for the TabCtrl content.

In I'm adding a tab to my TabCtrl with this simple line

```
void Setup(){  
    WithCtrlTabProperties<ParentCtrl> tabP;  
    mainTab.Add( tabP, t_("Websites") );  
}
```

The tab is created, but the content (CtrlTabProperties with a test button) is not showing up.

Did I miss something?
