Hello Dider,

It might be a problem with the keyboard, but also it might be a problem with the Wayland. From my experience the KDE Wayland implementation with U++ is usable in 6.2. Previous version are bug and they have terrible bug with X11 apps on Wayland. It causes application freezes on window resizing. What is worst is in such case even app restart doesn't help, so I definitely suggest using 6.2 and above.

Also, Wayland for KDE 5.x is experimental. The true Wayland implementation is targeted for version 6 and above. So for 5.x branch I definitely recommend using X11.
