

Hi,

I am happy to announce the immediate availability of WebDAV package for U++
It is also available via UppHub.

WebDAV Package for U++

A lightweight RFC 4918 compliant WebDAV client implementation for U++.

Features

- **Dual operation modes**: blocking and non-blocking
- **Complete WebDAV operations**: file transfer, directory management, properties, and locking
- **Built on HttpRequest**: inherits all HTTP functionality including SSL and authentication
- **Simple API**: clean, intuitive interface following U++ conventions

Supported Operations

- **File operations**: Load, Save, Delete
- **Directory operations**: MakeDir
- **Resource management**: Copy, Move
- **Properties**: PropFind, PropPatch
- **Locking**: Lock, Unlock, RefreshLock
- **Server info**: GetDAVOptions
