The second and last part of the official U++ Reference guide: non-core classes is now available as a paperback book on Amazon.

You can find it here: <https://www.amazon.com/dp/B0G19CC35M>

Now I can focus back on upgrading the Getting Started book, I have already material for the following extensions:

- Statusbar advanced
- Painter class
- Styles and Themes
- Animation
- Ctrl's, frames and layouts
- Flatpak installation
- JSON files
- Assembler inline
- HTML reference sheet
- CSS reference sheet
- JavaScript reference sheet

Should anyone of you have additional topics to include in the upgrade of the first book, please let me know!

Or if you have code that is worth for newbies as learning material, please send it to me, and I will look how I can include it.

Regards,
Frederik.
