Hello,

I have updated the previous package with some fix.

Now on my computer release mode and debug mode produce the same render and seems ok. I have even fixed the [X] behaviour (it didn't close when pressed).

Can somebody compile the package in both mode and tell me if there are any issue? Is is stable?

Can render tables without problems?

Please keep in mind that javascript is not processed. Do not expect to get good result with complex table or layout. There is not yet an action when a link is pressed.

Thanks,

Luigi
