---

Hi Iñaki,

at some moment my package using XInt stopped to work with error

```
C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (42): error: use of undeclared identifier 'utf8__' (): 42 | u tf8__::utf8to16(utf8_string.begin(), utf8_string.end(), std::back_inserter(result));
C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (49): error: use of undeclared identifier 'utf8__' C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (56): error: use of undeclared identifier 'utf8__' C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (63): error: use of undeclared identifier 'utf8__' C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (89): error: use of undeclared identifier 'utf8__' C:\upp\UppHub\XInt\plugin\XInt\source\detail\unicode.cpp (95): error: use of undeclared identifier 'utf8__'
```

It was the second time it happened and the last time I had to reinstall the whole Upp.  
Today I discovered that if in the file unicode.cpp I modify it in this way

```
#pragma clang diagnostic push
#pragma clang diagnostic ignored "-Wdeprecated"
#pragma clang diagnostic ignored "-Wweak-vtables"
#pragma clang diagnostic ignored "-Wsign-conversion"
#pragma clang diagnostic ignored "-Wsuggest-override"
//#include <utf8.h> //<--- comment this one
#include <plugin/XInt/third-party/utfcpp/utf8.h> //<---- new include
#pragma clang diagnostic pop
```

it works. I do not know why. However now it works on my machine.

Best regards,  
Luigi
