Hello,

here is a simple code snippet that print on the screen the content of a DBF file by using the DbfStream stream.

Luigi

```
#include <Core/Core.h>
```

```
#include <TCore/dbf.h>
```

```
using namespace Upp;
```

```
CONSOLE_APP_MAIN
```

```
{ int i;
```

```
DbfStream dbf;
```

```
if(!dbf.Open("C:\\upp\\out\\MSC8\\club.dbf", false) ) {
```

```
    return;
```

```
}
```

```
int NFields = dbf.GetFieldCount();
```

```
while(dbf.Fetch()) {
```

```
    String text;
```

```
    for (i=0; i<NFields; i++) {
```

```
        text << dbf[i] << " # ";
```

```
    }
```

```
    text << "\n";
```

```
    Cout() << text;
```

```
}
```

```
    dbf.Close();
```

```
}
```
