To be able to use SqlId::As() with PostgreSQL, you have to change Sql/SqlVal.cpp:

```
SqlCol SqlId::As(const char *as) const
{
 //return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL, " as ")(" ") + as;
 return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL | POSTGRESS, " as ")(" ") + as;
}
```
