Quick fix:

```
ctrl Option {  
    group "Push";  
  
    Text  SetLabel @1 ? "Option text";  
    Font  SetFont = StdFont() @1;  
    Frame SetFrame @2;  
    bool  BlackEdge;  
    bool  SwitchImage;  
    bool  SetEditable = true @1 ? "Editable";  
    bool  ThreeState;  
    bool  NotNull;  
    Text  Tip @2;
```

("@2" does the trick -> means put this 2 inheritance levels deeper).
