Subject: Theide renames .tpp files

Last stable version

I have dozens of files documenting tables in the .sch file
they are in the MyApps/project/srcimp.tpp directory

an example filename is
S_ARTIKEL$en-us.tpp

if I edit that file it is suddenly
S_ARTIKEL_en-us.tpp

It changes the $ in the name into an _
this gives problems with svn and the hovering over a topic stops working till I rename it back

Yes it was surprisig for me also. I created a simple script based on the output of an ls command.
It was a lot of git mv commands.

Sorry for late reply.

This is intentional - I have found there are problems with '$' for certain compilers / environments...
