Subject: NotNull not working with custom SetConvert [CLOSED]

Hi there,

Trying to have an EditDate with custom setconvert with the following struct:

```
struct ConvWorkDay : ConvertDate {
 ConvWorkDay() {NotNull();};
 virtual Value Scan(const Value& text) const;
};
```

Hoping that the EditDate won't allow null value. This worked in previous version, but not now.

Any help please?

Sorry! I screwed up!

The commented line caused all that trouble

```
Value ConvWorkDay::Scan(const Value& text) const {
 DUMP("ConvWorkDay::Scan");
// if(text.IsNull()) return Null;

 Value v = ConvertDate::Scan(text);
 if(v.IsError()) return v;

 Date d = v;
 if(IsHoliday(d)) return ErrorValue("Cannot be a holiday!");
 return v;
}
```
