Working with U++ is really a charm.
Because I'm not programming every day, I made a sort of basic reference guide in PDF in order to get me started.
It is based upon the tutorials on the site + the examples on the site.

I loved to share this one with those interested to learn U++

Have fun!
If somebody has some remarks, or find errors; please let me know!
I'll be happy to update it in a newer version.

Fred.

Hello Frederik,

You did excellent job by providing this document! One minor thing from me is that you could use U++ framework instead of Ultimate++ framework. We now preferred this name in all public communicates. So, would be good if you could change it on the document.

Do you think you could share this document outside our community/forum? Social network? Separate website? It should be very helpful from framework marketing point of view.

You should also consider writing whole book about U++ You are going into good direction.

Klugier

Hello Klugier,

Thanks a lot for your support, I might hope it serves others

The title and footer has already changed to U++, this was the easy part!

I'm also in contact with Mirek to correct some minor mistakes, really appreciated. When I have a v2 I'll post it asap.
Once I get a "checked" version, I will certainly publish it on my LinkedIn page, since I work in the IT business I have a lot of contacts. It could help indeed to spread the word!

About writing a book, I was already searching on Amazon if there was a book, so maybe this could be the first one
You never know, it would be a work of one or two year(s) since I don't have much spare time, but to be considered, maybe. If the authors agree, and would help me around, could be cool indeed

Bye,
Fred.

I am suggesting to convert this to github project so that we can have more contributors.

Anyway, the source format is now .pub. Can anybody suggest some better format so that people can contribute better?

My idea is to use qtf / .tpp and then some U++ code to generate those pages. It would work, but does not really feel like the best solution...

Mirek

Could be great to produce something like this:

https://htmlreference.io/

Hello everybody,

Since I received some feedback, and went to some extra examples, I made a new version 0.2.0.

For those who are interested

I also made a generic C++ 20 reference card that I want to share with you.
It has been made using resources of a Dutch University. The teacher is also sharing it with his students now

Hello Frederik,

It is good that your manual is living. If I may suggest something, I would make font a little bit bigger (code is difficult to read). You can also thing about splitting it between two columns instead of three.

Klugier

Hello Klugier, glad you like what I'm doing

The reason why I have rather small charsize is because I want it to fit on 4 pages, so max. 2 printed pages recto/verso.

How I use them:
- or on the second screen with full screen PDF: okay to read, also the code examples (I do have 4K screen, hope it also is fine to read on FullHD);
- or I use the printed version color laser 1200dpi: also okay but need good eyes indeed ;
- or one can print them out and scale-up to A3, I tried this today and looks great. In this way you can put them on the wall for reference or decoration

Keep on doing the good work... still love U++ as day one.

Hello everybody,

Since I'm programming with SQL lately, I also found a lack of a good reference sheet for SQL
And since I love to make reference sheets, I have started with a first version.
As always, happy to share this one with all of you!

Have fun!

Frederik.
