I have been trying to use Snow2 reference code for decoding, the cypher example works great but it is only encrypting i need to decrypt as well but there is not any documentation about it (just one pager but no exmaples or detaied documentation), just relaying on forum answers which is the slower option but the only one, hope anyone knowing the algorith can tell me how to decrypt, thanks

meanwhile i ended up using openssl and GCM, it works pretty well

Ernesto
