Subject: LeftDrag triggers only once

The example Scribble looks like its supposed to be a drawing app but it looks like its only able to put dots on the paint area. I noticed that LeftDrag only triggers once. I am on linux and ubuntu 22.04.

It seems to be that LeftDrag should be triggering the whole time that the mouse is dragging otherwise one would have to set a trigger flag and then use MouseMove to do the rest.

What is the expected behavior of LeftDrag
