I m trying to display icon using the path in the GridCtrl cell. but its not working and directly storing as Image(100,100).

And I m using GridDisplay only to display but still not working fine.

For references i am attaching documents below.

In tool.png, how it is showing in GridCtrl, but w.r.t ArrayCtrl it is working fine.

Hi Aarush,
Welcome to U++ forums.

If you could provide a basic example code to replicate the issue, it would be more helpful. However, from the screenshot, it seems that the column display is set to `StdDisplay()`. You can simply set the `Display` of the column to `ImageDisplay()`, or when passing the image use `AttrText` structure, which you can set image and will display it in even `StdDisplay`.

Best regards,
Oblivion
