something like System(...) in Visual C++...

Need to run some bash scripts in separate thread(f.e.) or somethingl like that in my up app  
any clues? thnx

Well, first clue: This is C++. You can use any libraries, including POSIX in Linux and Win32 API in Windows you want. Standard C library has 'system' function.

I though some clue in up context .  
but this does not exclude my thanx
