hi,

I am working around an new package, and, for some functions, I want use external library, like DLL or OCX. (The concept is that the executable load the "plug-in" included in the package).

Can I use only DLL, or for GUI window I need to use OCX libs??

And for load OCX can I use the sae solutions like for DLL: LoadLibrary(..); GetProcAddress(..) ??

thanks
Mauro B.

.DLL.

OCX is (AFAIK) DLL that contains COM interfaces - something you most likely do not need and do not want to use.
