One entry in "CtrlCore / Ctrl" reads:

```
static dword KEYtoK(dword)
```

Returns all opened top-level Ctrls of process. Top-level Ctrls are those without parent (GetParent() == NULL) - TopWindow Ctrls and pop-up Ctrls.

Return value Vector of all top Ctrls.

Shouldn't it read:

```
static Vector<Ctrl *> GetTopCtrls()
```

...

?

If so, what does "static dword KEYtoK(dword)" do?

Werner

Thank you, fixed.

KEYtoK - implementation issue. Should perhaps be private, but is used by several classes to deal with platform keystrokes.
