Hi all! =) well i read something about comment a group of lines automatically in U++ but i don't know how to do this. I work in Linux and for example with Kate editor we can select some lines and press Ctrl+D and all lines selected passed to commented lines. How to do this in U++? Sorry about my poor english and thanks for your help =)

This has to be activated in Setup/Environment/Editor

[* / enclose selection.

Then just press / or *.

I also remind that one can press ctrl + / to comment in java doc style.

BTW: After 2007.1 assist++ need serious refresh. There are too many cases when it doesn't work.

Yes...

BTW, it would be helpful to start building a database of problems... as isolated as possible.

I mean, perhaps single package not using any other package, couple of lines of testcase that is broken w.r.t. Assist++.
