I've added some bash scripts to current svn repo usable to build various debian packages. See 'linux_scripts' folder and README inside it for instructions.

Feel free to comment, add stuffs or correct bugs !

Ciao

Max

Awesome scripts. They are very useful. I was looking on them and will try them ASAIC.

Thanks,

Andrei

From README:

2) You MUST have Upp executables installed.

It would be useful to put a Makefile to build TheIDE in NOGTK mode under SVN. Theoretically, it can be generated via "umk uppsrc ide GCC -M >GUI,NOGTK" command.

It would be useful to put a Makefile to build TheIDE in NOGTK mode under SVN. Theoretically, it can be generated via "umk uppsrc ide GCC -M >GUI,NOGTK" command.

It would also be good to have a makefile to build theide without the need to have upp installed first... But my skills on configure/makefiles aren't enough
If you want to provide such scripts, I'll be glad to add to svn !
They would solve the problem for non-debian users too....

Max
