hello all

why this code hangs

```
FtpUploader::FtpUploader()
{
 CtrlLayout(*this,"Upload" );

 btn_uplaod <<THISBACK (btn_upload_OnClick);
 prog1.SetText(IntStr(client.GetSavePos()));
 prog2.SetText( IntStr(client.GetSaveTotal()));
 client.WhenProgress = THISBACK(pro);

}
void FtpUploader::btn_upload_OnClick()
{
 status.SetText("Connecting");
 client.Connect("ftp.servage.net","tecno","password");

 status.SetText("Connected");
 //client.
 //x = client.WhenProgress ;
 client.Save("testo.txt",LoadFile("D:\\fileupload-class.php"));
}
bool FtpUploader::pro()
{

 //prog1 and prog2 are labels

 //pi.Set(client.GetSavePos(),client.GetSaveTotal());
 prog1.SetText(IntStr(client.GetSavePos()));
 prog2.SetText( IntStr(client.GetSaveTotal()));
 return false;
}
```

this program hangs then after some time returns to be normal after uploading file

On first glance, because it is not threaded. I'm not sure if those classes are threaded by default though. Do you have MT enabled?

Hard to say.

Have you tried in some good debugger to find out WHERE it hangs?

Mirek

i opened it in new thread and it worked ok

but what i know is that i dont need to use threads here as gate will make GUI update automaticaly
