Hi to all,

I could imagine the compiler output better, if there would be a filter to display the errors only. We would be more quick to go ahead with fixing.

Its enough to show one at a time, would be more clear. I love it to take the F4 for the next one.
It seems better to me to avoid any text not required for fixing.

I guess the compiler output needs to be parsed for that, to retrieve the actual errors out of it.

Hmmm, I'm not Picasso, but here is a design:

Many bugs have several entries referring to the single problem. Therefore I believe this is not the best idea.

Maybe the font-size could be incremented at least, to 11 pt or so. For folks who don't see so good.

Martin
