Hello,

I am using a table to accomodate text and image but I do not want that the internal border be visible when print the document. Only the extern border can be printed.

Is it possible? I was not able to do it.

Thanks,

Luigi

You mean those blue lines in RichEdit? Those are not printed - this is just information for you while editing.

If not blue lines, sure, you can set everything to zero. There is even special command '~' to do that. See QTF reference.

Thanks,

that sign delete everything, so to preserve the outer border I needed another external table without '~'.

Well, you do not need to set everything to zero. Or you can set something back to non-zero after ~.
