Dear all

When I want a new possibility from Upp, it is Upp the main source of solutions. One example: Sample TreeCtrl looks not very good as the icons are too simple, but with a little change you get fine native icons (see "Before" and "After").

How to do it?. Very simple. Go to main.cpp and in OpenDir() function change this:
tree1.Add(id, ff.IsFolder() ? CtrlImg::error() : CtrlImg::File(),
with this:
tree1.Add(id, ff.IsFolder() ? GetFileIcon(n, true, false) : GetFileIcon(n, false, false),
To use function "Image GetFileIcon(const char *path, bool dir, bool force)" you have to go to declare it in, for example, FileSel.h and go to FileSel.cpp and in the definition change:

Image GetFileIcon(const char *path, bool dir, bool force = false)

by

Image GetFileIcon(const char *path, bool dir, bool force)

Thats all. Thank you Upp developers!

tree1.Add(id, ff.IsFolder() ? GetFileIcon(n, true, false) : GetFileIcon(n, false, false),
 I would write as:
 tree1.Add(id, GetFileIcon(n, ff.IsFolder()),

And it's WIN32 specific :/ ... but nice change.

Hi Mr_ped

I cannot get it now but there is a promising

---> Image GetFileIcon(const String& folder, const String& filename, bool isdir, bool isexe);

between #ifdef PLATFORM_X11 #ifdef flagNOGTK

As this is the function that FileSel uses in Gtk ... it will work!.

Perhaps I will do a little bit more in few days and I propose you a unified function for Linux and Windows.

Sorry for not waiting some days to check it in Linux. I was so happy that I could not wait.

And I am checking new gems from Upp very useful to show you in few days ...

Best regards
Koldo

Dear all

Thank you for waiting... Now it works also in Linux.
The function is:

```
Image NativeFileIcon(const char *path, bool folder)
{
#ifdef PLATFORM_WIN32
    if (folder)
        return GetFileIcon(path, true, true);
    else
        return GetFileIcon(path, false);
#endif
#ifdef PLATFORM_POSIX
    bool isdrive = folder && ((path == "/media") || (path == "/mnt"));
    FindFile ff(path);
    return isdrive ? PosixGetDriveImage(ff.GetName())
        : GetFileIcon(path, ff.GetName(), folder, ff.GetMode() & 0111);
#endif
}
```

```
}
```

It is also necessary to add this in FileSel.h

```
#if defined(PLATFORM_WIN32)
    Image GetFileIcon(const char *path, bool dir, bool force = false)
#endif
#ifdef PLATFORM_POSIX
    Image GetFileIcon(const String& folder, const String& filename, bool isdir, bool isexe);
    Image PosixGetDriveImage(String dir);
#endif
```

And as I have explained in the first post, go to FileSel.cpp and in the definition remove "= false" from:

```
Image GetFileIcon(const char *path, bool dir, bool force = false)
```

This is only a simple patch I have found useful. But it would be great if the FileSel developer could integrate this inside the code. Thank you very much to him/her.

Best regards
Koldo

koldo wrote on Sat, 04 October 2008 08:39Dear all

Thank you for waiting... Now it works also in Linux.
The function is:

```
Image NativeFileIcon(const char *path, bool folder)
{
    #if defined(PLATFORM_WIN32)
        if (folder)
            return GetFileIcon(path, true, true);
        else
            return GetFileIcon(path, false);
    #endif
    #ifdef PLATFORM_POSIX
        bool isdrive = folder && ((path == "/media") || (path == "/mnt"));
        FindFile ff(path);
        return isdrive ? PosixGetDriveImage(ff.GetName())
            : GetFileIcon(path, ff.GetName(), folder, ff.GetMode() & 0111);
    #endif
}
```

It is also necessary to add this in FileSel.h

```

#if defined(PLATFORM_WIN32)
    Image GetFileIcon(const char *path, bool dir, bool force = false)
#endif
#ifdef PLATFORM_POSIX
    Image GetFileIcon(const String& folder, const String& filename, bool isdir, bool isexe);
    Image PosixGetDriveImage(String dir);
#endif

```

And as I have explained in the first post, go to FileSel.cpp and in the definition remove "= false" from:

```
Image GetFileIcon(const char *path, bool dir, bool force = false)
```

This is only a simple patch I have found useful. But it would be great if the FileSel developer could integrate this inside the code. Thank you very much to him/her.

Best regards
Koldo

Adopted as

```

Image NativePathIcon(const char *path, bool folder)
{
    #if defined(PLATFORM_WIN32)
        if (folder)
            return GetFileIcon(path, true, true);
        else
            return GetFileIcon(path, false);
    #endif
    #ifdef PLATFORM_POSIX
        bool isdrive = folder && ((path == "/media") || (path == "/mnt"));
        return isdrive ? PosixGetDriveImage(GetFileName(path))
            : GetFileIcon(path, GetFileName(path), folder, ff.GetMode() & 0111);
    #endif
}

```

```

Image NativePathIcon(const char *path)
{
    FindFile ff(path);
    return NativePathIcon(path, ff.IsFolder());
}

```

(BTW, is my simplified GetFileName solution corrent or was there any other idea why have you used FindFile?).

Hello luzr

Thank you for considering this!

I have used FindFile because of the ff.GetMode() & 0111. Please do not forget to go to FileSel.cpp and in the definition remove "= false" from:

Image GetFileIcon(const char *path, bool dir, bool force = false)

Also I would like you to consider the fix in FileSel.cpp in

[#msg_18542](http://www.ultimatepp.org/forum/index.php?t=msg&goto=18542)

Best regards

Koldo
