Please try this patch (it worked for cs-cz :):

```
void TrayIcon::Notify(dword msg)
{
 if(visible) {
  nid.flags = NIF_ICON|NIF_MESSAGE|NIF_TIP;
  if(nid.icon)
   DestroyIcon(nid.icon);
  nid.icon = IconWin32(icon);
  String stip = ToSystemCharset(tip);
  int len = min(stip.GetLength(), 60);
  memcpy(nid.tip, stip, len);
  nid.tip[len] = 0;
  VERIFY(Shell_NotifyIcon(msg, (NOTIFYICONDATA *)&nid));
    }
}

void TrayIcon::Message(int type, const char *title, const char *text, int timeout)
{
 if(!IsWin2K())
     return;
 nid.flags = 0x10;
 *nid.info = *nid.title = 0;
 if(text) {
  String h = ToSystemCharset(text);
  memcpy(nid.info, h, min(h.GetLength(), 255) + 1);
  nid.info[255] = 0;
 }
 if(title) {
  String h = ToSystemCharset(title);
  memcpy(nid.title, h, min(h.GetLength(), 63) + 1);
  nid.title[63] = 0;
 }
```

```
 nid.infoflags = type;
 nid.timeout = minmax(timeout, 10, 30) * 1000;
 Shell_NotifyIcon(NIM_MODIFY, (NOTIFYICONDATA *)&nid);
}
```

(it is on svn too).

Mirek
