Hello,

I have several version of TheIde and all are crashing when i try to build with "all shared" output mode.

By the way i don't know how to build only one specific package as shared lib.

Does it mean that this feature is experimental for win32 ?
I would really love this, is it a priority or not ?

For your information i have tried on linux but there is compilation errors

And it seems that package are not build in the right order. Core is build before plugin/z so there is link errors.
