Subject: Problem trying to run the example package OleCalc

I am just now (last two days) evaluating the U++ ide and I am very impressed so far. To introduce myself to the environment, I have been trying to run and modify the example packages. All except the OleCalc run fine. When I build and try to run the OleCalc example everything compiles fine but won't run with the message:

Unable to launch " C:\upp\out\MSC9.Debug.Debug_full.Dll.Gui.Mt.Noblitz\calc.ocx "

popping up. What is going on?
