I think codelite is my favour IDE, and I am writing a version which embeded the great VIM inside codelite. Now It seems to work perfectly well.

There are too many differences to me between U++ and other IDE, I must say, it is really hard to understand.

How one can join your fanclub?

I mean is there a link to the source code?

TIA

If I recall correctly codelite and vim are licensed under GPL. So, you have to release the source code

Yeah, I know, so I can't release it. Current time it is not open, not business, not company, in fact, it is not "exist" to public.

Only if he does distribute it. As he's holding it on his local HDD and he doesn't give it to anyone else, he does not have to release anything.

Although it's sort of pity he can't support people who show interest in it.
