Hello

Is it possible to add comment/uncomment feature for selected text? Like "Ctrl + shift + c" and "Ctrl + shift + x" in CodeBlocks?

Or it is already implemented and I didn't found it?

/Radek

Select lines, press "/", or select text, press "*" (only comment works for me, uncomment not).

It may be you have firstly to check Setup/Environment/Editor/ [{("*/ enclose selection.

I find the "/" very convenient, sometimes even " and brackets help. The * usually just gets into my way.
