Hi ,
I'm getting the following when trying to build the ide\Debuggers package in windows:

Linking...
(option '-O 2' ignored)
___main: duplicate
-> used: libmingw32.a:gccmain.o:1
-> discarded: libgcc.a:__main.o:1
1 undefined symbol(s):
_WinMain@16 (referenced from libmingw32.a:main.o:1; _main; .text)
linking aborted due to fatal errors
collect2: ld returned 1 exit status

Could you please advice/
Thanks,
gnunt

ide\Debuggers is not a main package - it does not produce executable target. It is in fact package used by TheIDE, cannot be used separately.
