Subject: HttpQuery - not working?

What's wrong with this program? I would have expected it to print 'John'. Instead it's output is:

Name=

The program

```
CONSOLE_APP_MAIN
{
  HttpQuery q("http://google.com?name=John");
  Cout() << "Name=" << q.GetString("name") << "\n";
}
```

Thanks,

Jeremy

Ah, I got it. I set out to fix this "bug" this morning and when stepping through the debugger it hit me. The key is converted to Upper Case.

Thus:

```
CONSOLE_APP_MAIN
{
  HttpQuery q("http://google.com?name=John");
  Cout() << "Name=" << q.GetString("NAME") << "\n";
}
```

works.

Jeremy
