Hi,

I am working on application that is controlled by a touchscreen and don't know how to make scrollbars in ArrayCtrl wider. Are there any examples how to use SetScrollBarStyle or FrameButtonWidth_Write ?

Ok, I see my mistake. SetScrollBarStyle takes reference, not copy of ScrollBar::Style, so style must be global or static.

```
table.AddColumn("Column #1");
table.AddColumn("Column #2");
table.Add("1","2");
table.Add("3","4");
static ScrollBar::Style ss = ScrollBar::StyleDefault();
ss.barsize = 30;
table.SetScrollBarStyle(ss);
```
