I have an alpha release of PikaCRM.
It's my first time to release a software publicly.

View of the customers funtion:

View of the orders funtion:

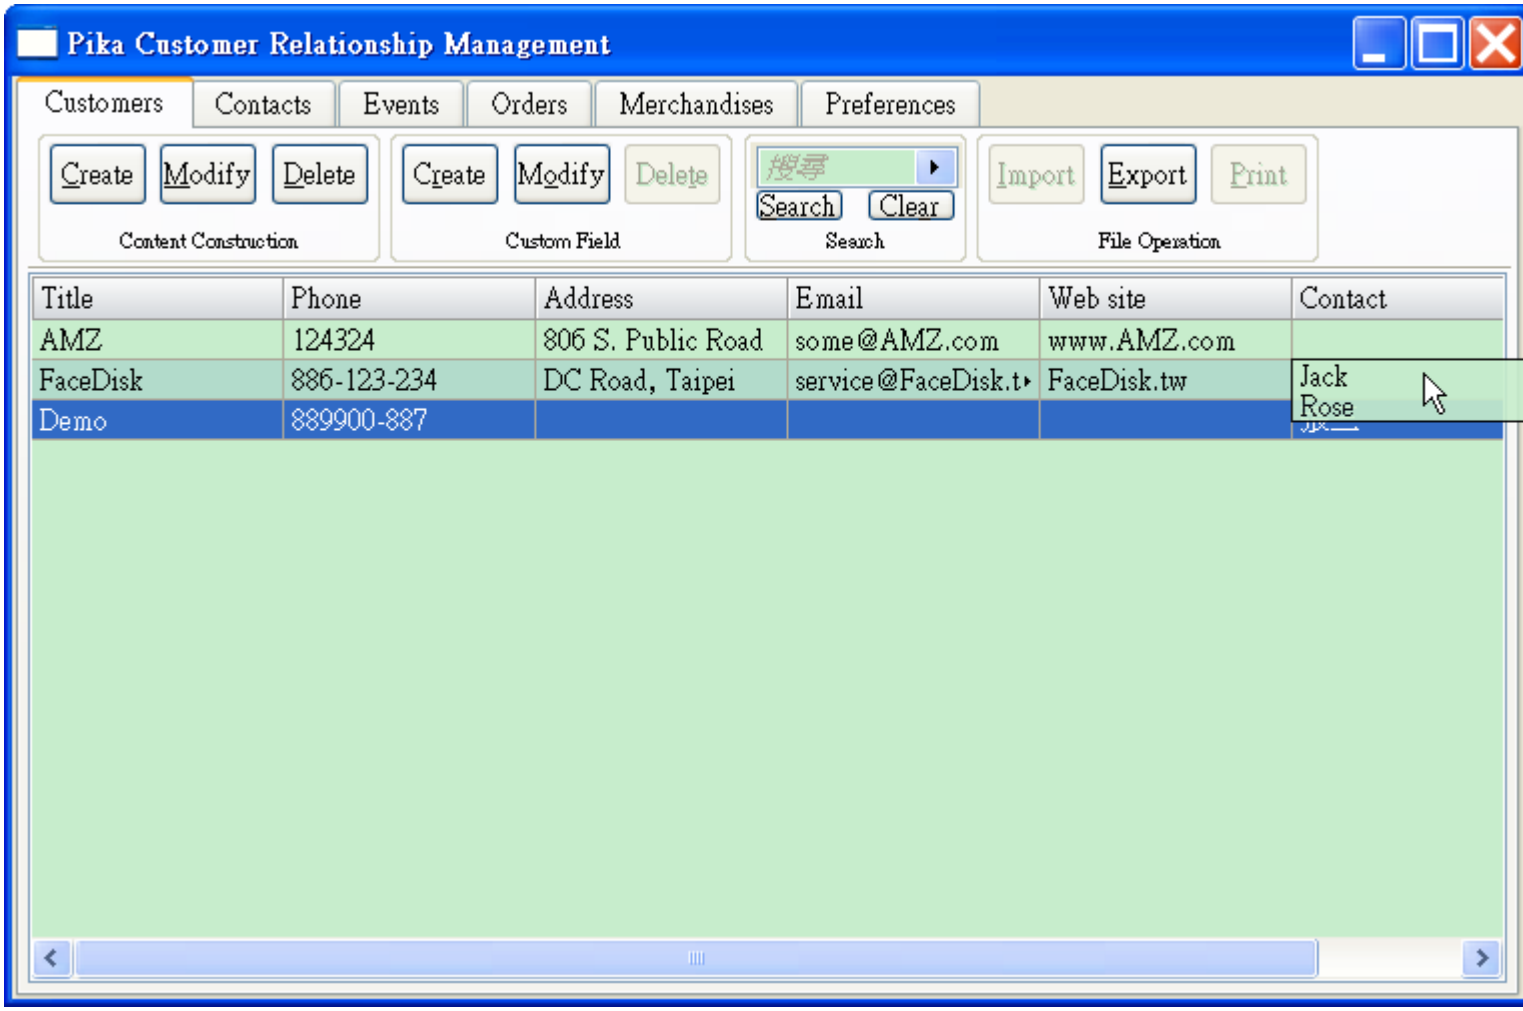

The database and log will store in user's home directory.
Windows: C:\Documents and Settings\\Application Data\.PikaCRM
Linux: ~/.PikaCRM

Download:
Windows portable
Ubunte portable
All are 32-bit. The Linux version now is only tested on Ubuntu.
You can find news in PikaCRM website and there are lots of to-do.

Notice: This is a pretest version.

Kasome, thank you for trying the application.
There is an update version, 1.0 beta 1.

The contacts function and the search:

The Events function and the export function:

The merchandises function and the import function:

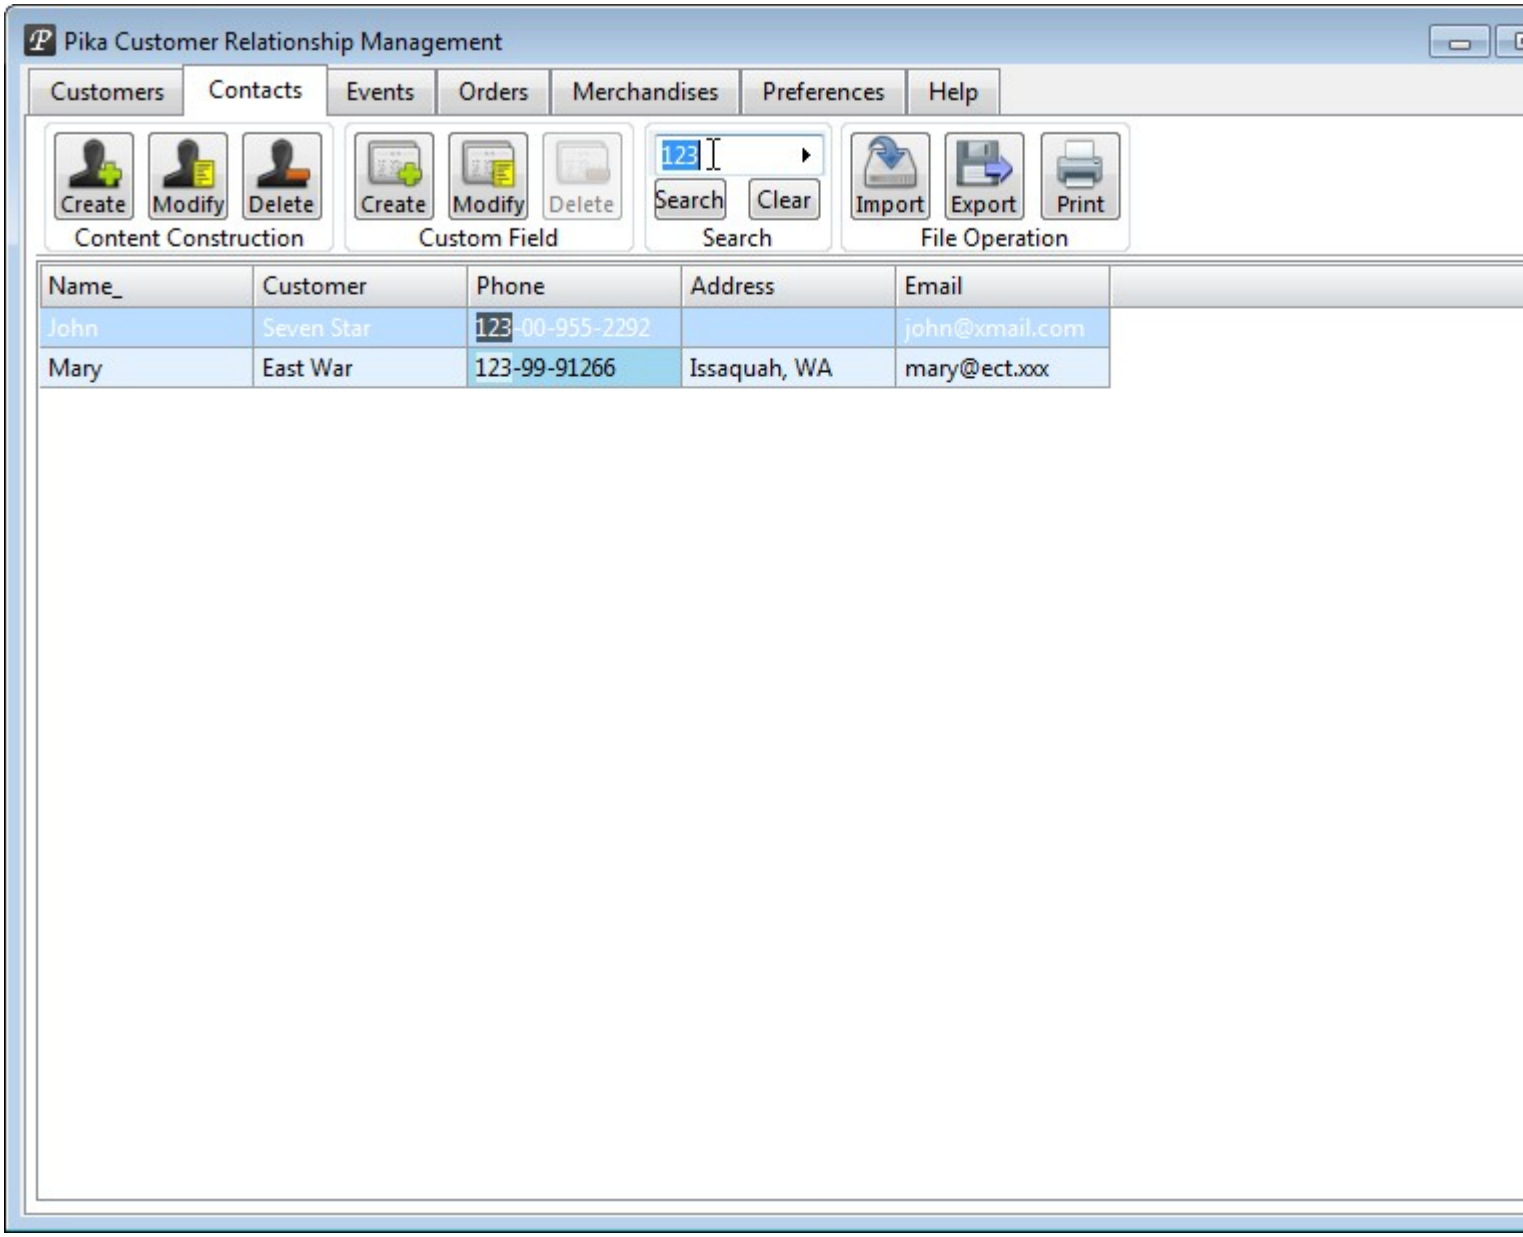

Downloads:
Windows portable
Ubunte portable

Already tested on Ubuntu 10.04, 9.04,
Windows XP, 7, Vista

A little change to the place storing the database and log.
Windows: Data\ in the directory of the application exe file
Linux: ~/.PikaCRM

There is a stable version 1.0 release.

* Add a prevention against tampering the encryption of the configure file
* Add a prevention against tampering the password
* Add a new language, Simplified Chinese
* Add the Linux shell script for short links

* Add the profile Image and the card image fields of contracts

Downloads:
Windows portable
Ubunte portable
Any advice is welcome!!

finally,
I let it open source in github.
https://github.com/sevenjay/PikaCRM
And the license will be MIT license.

Thank you guys all

Hello Sevenjay,

Late comment sorry but your application looks fine and is useful. Congratulations.

_____
Cheers
