Hi all,

I've been working for some month now (almost two years) on an app for my favorite soprt: spearfiching.
It allows to:
* prepare competitions
* manage competitors and clubs
* count points and result rankings
* output well formated result documents using my report generator package

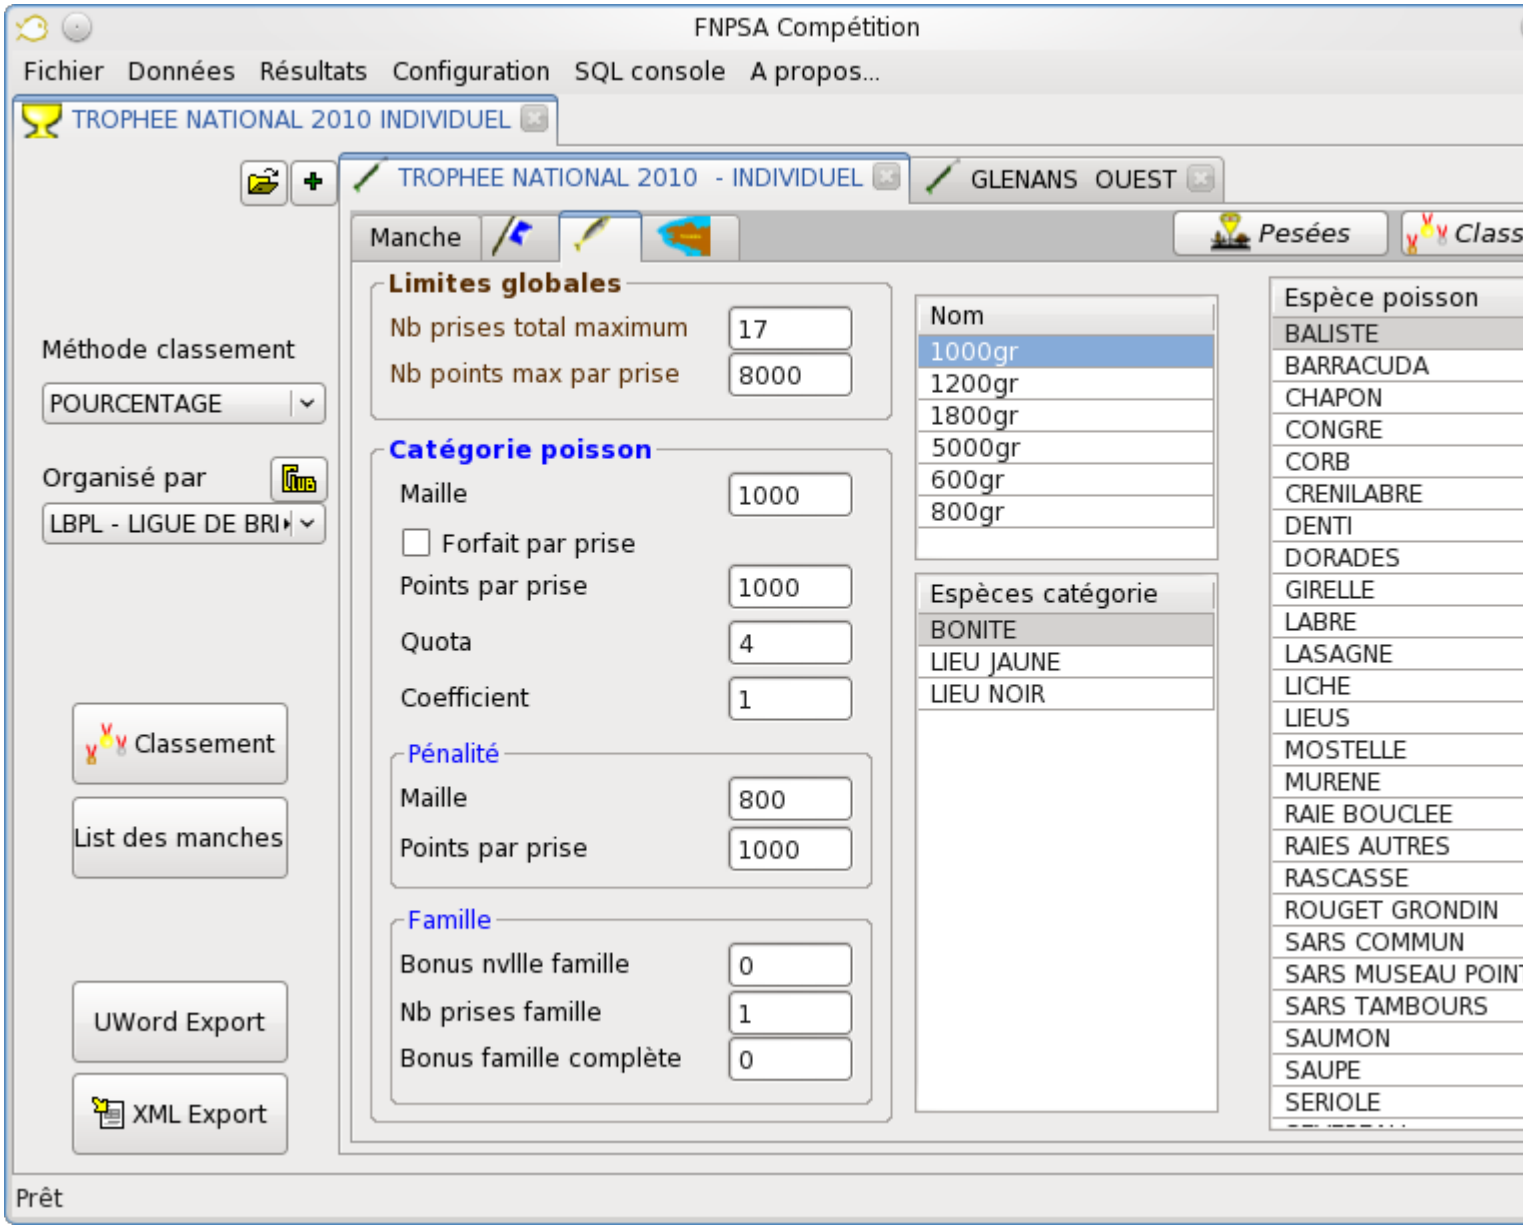

It uses an sql3 db and works fine under linux and windows

It's been used to manage the latest French national championship.

Here are some screen shots.

And you can see an example of the complete report it generates after the competition at:

French championship results

All was generated using pure U++ technology (except for the report generator which uses 'C++ boost spirit')

Nice to know what to expect from U++. In fact it is posts like this which brought me to use U++.

Regards
Jerson

Didier: nice work.

(but some buttons placements and sizes of UI hurts my eyes, like those 2 buttons [Pesees] [Classement] touching the line on top, but having space at bottom, icons touching upper border everywhere, etc... all +-2pix minor things, but I think if you have some spare time, you should set up some rules like 2pix of padding everywhere, and polish the UI a bit to follow it)

Oh, sorry, I'm again being criticizing something I like in the first place, but that's me, aiming for perfection all the time... I hope you will understand how I meant it.

Yes, nice

Is there a fish in the window left upper border ?

Hi mr_ped and Koldo,

mr_ped:
The GUI isn't finished and I know some buttons aren't well paced at all. But I'll arrange that sooner or later.

I appreciate you're critics since I'm not used to doing GUIs, thanks for the tips.

Koldo:
Yes it is a fish
