Hello Mirek,

The removal, in rev.3292, of the handling of WM_TIMER in Ctrl::UtilityProc (Win32Wnd.cpp) broke the Docking framework (Docking package in bazaar).
Could you give some insight in the removal of this code, please? Then, maybe, I could find and suggest a solution.

PS: I do not know if the original author of this package, James Thomas, is still maintaining it. But since it is (kept) broken since rev 3292, I have some fears.

Best regards,

frank

I'm still around, I just don't use Upp daily anymore so I'm not involved as much (though I have plans)

I'll try and get time to have a look at it. It doesn't use WM_TIMER directly so I'm not sure why it should be broken as long as the TimeCallback functions still work.

Yes, Docking is not working anymore with the recent U++ versions. Is there any possibility to have it operative again?

Thanks,

Javier

Hello Mirek,

I noticed you even promoted this to the 'mainstream'.
That's wonderful news.
Will the form designer (bazaar) package follow perhaps?

Have a nice weekend,

Frank

Hello all

I would propose to remove old and outdated Bazaar/Docking packages and move the samples to Examples.

I have moved the sample to 'reference' already.

http://www.ultimatepp.org/reference$DockingExample1$en-us.ht ml

(Hm, I have to remove Bazaar

And, what about DockCtrl packages from Ismail Yilmaz?.

They seem to be not supported.
