Hello all

In MSC9 the breakpoints in templates do not work.

Now the dirty trick I use is to put in the template to debug a call to a dummy function located in a .c file, and to put the breakpoint in that function.

Do you know if it is possible to activate the debugging in templates?

Do you know if it is possible to activate the debugging in templates?

I hope so, with some effort... Please, put it to readmine (and perhaps create "debugger" group).

Mirek

Hello Mirek

Done here.

I am sorry to give you more work .
