Subject: GridCtrl copy/paste extra columns

Hi Daniel,

When I select a block of cells using ctrl+mouse and then paste into Excel I get an extra column of blank cells. I am used to this as it has always happened (since you kindly added copy-paste functionality to GridCtrl) but thought I would mention it here as it may be connected to the issue below.

When I copy from Excel into GridCtrl and the last column is pasted into an Option column, the 1s in the column do not get translated into checked options in the GridCtrl. In general, the option ctrls copy and paste into excel as either 1s or 0s and they paste back into the GridCtrl fine too (1s become checked options) but the last column does not get set correctly if it is options. A workaround for this is to copy and paste an extra column of blanks which is then ignored.

Hope this is enough to recreate the issue.

Cheers,

Nick

Thanks! I'll take a look at it.

Has there been any progress on this? I am using 5503 and still see the same behaviour.

Thanks,

Nick

Cool! While you're in there, any chance we could get a select all (Ctrl+A) added to the menu please?

Fantastic! Thanks Daniel.

What version should I look out for?

Nick
