Subject: Task: How to read GTK/Gnome settings

We have a couple of problems where I would welcome community help...

Most of time it involves pointing us to the right direction - website, snippet of existing code etc.. Of course, code contribution is possible as well, but most often it is information that I really need....

To start with, I would really need to know how to read "GTK settings" - I mean as much information about GTK as possible (font settings, colors, widget settings etc...).

Mirek

I know almost nothing about this, but I think most user-settings in GNOME and many other programs is maintained via GConf. http://www.gnome.org/projects/gconf/
You can get the idea by browsing it running gconf-editor. I hope this is what you mean.

Ehm, the post is from 2006. Today, these issues are completely resolved

IMO, current level of GTK integration is quite good.

I'm sorry, I misread the 2006 as 2008.
