Subject: Cannot scroll selected node into view from code [SOLVED]

I've got a treectrl with a directory listing.
The key for each node is the full path to a directory and
the text is the directory name.
I've also got a lineedit into which I can type a path and
then I want to select this path in the treectrl and have it
scrolled into into view. How do I specify to the treectrl to
do this?

It was a typo in my own code that caused problems - Treectrl works as it should.
javascript:%20insertTag(document.post_form.msg_body,%20'',%2 0'%20:blush:%20');
