Hello,

I have a GridCtrl that let appear a popup menu by a right click.

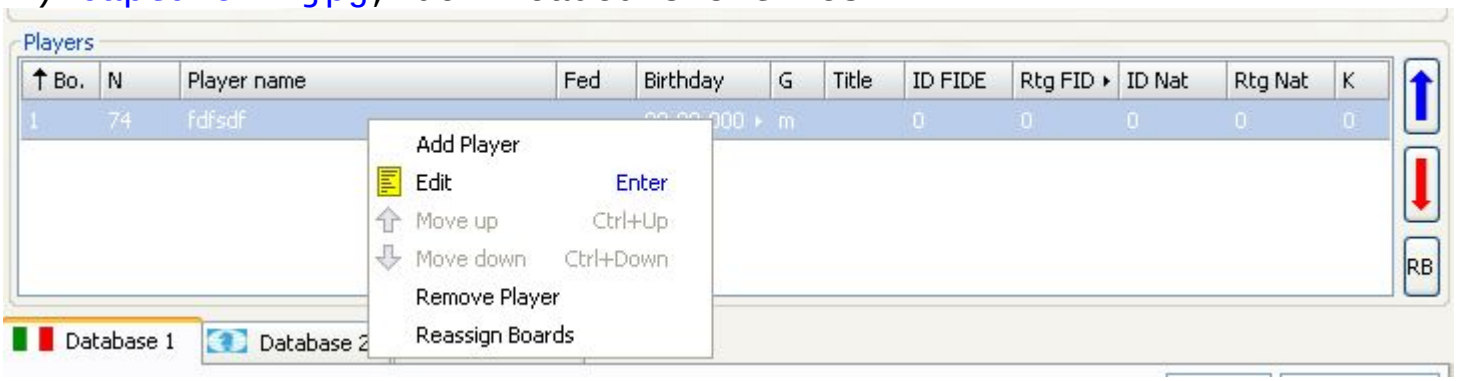

The problem:
a) if the grid is empty (no rows) the popup appear in any place I right click over the grid;
b) if the grid contain some element the popup appear ONLY if I right click on some row while it does not appear when right click in the empty grid.

Is this normal? I would expect that a) behaviour irrispective of the precence of the rows.

Thanks,
Luigi

Thinking better I see this is normal. In the standard menu there are actions like row-up and row-down and make sense that one should select one row and not just produce a void right click. This means that I must remove my custom action from that popup.

Luigi
