Subject: Convert C# code to U++?

Hello,

Does anyone have any idea how one might automatically convert their C# code to U++? There are many parts of Core that would be compatible with a lot of basic functions... And a lot of the other functions, like paint and controls, have compatible counter parts in C++. Has anyone done this with any success?

I think there are some utilities out there to convert C# to C++, but there would still be a ton of effort afterwards to get your code to work. Even if there are some similar classes in each C# and U++, they are still far too dissimilar and the user would need to manually convert most of the code anyway.
