Subject: Docking files in bazaar and uppsrc differ

Docking files in bazaar are different from those in uppsrc and they don't compile.

I compiled and installed upp-x11-src-5485 in my home folder per the default.

The errors start with 'width is undeclared in this scope'.

I can't find my previous post on this in order to edit it. Anyway, when I moved the uppsrc version of Docking into bazaar it started working.

Hello Rainbowsally,

Docking is already fixed (Removed from bazzar and move to Upp Core library). For more information please read following forum thread: http://www.ultimatepp.org/forums/index.php?t=msg&goto=40 276&&srch=docking#msg_40276.

Please notice that release 5485 is from 2012. Now, we have 2015 and 8017 (nightly) . Personally, I think it would be greate to have stable release in 2015.

If you want to try latest version you can download nightly builds from http://www.ultimatepp.org/www$uppweb$nightly$en-us.html, but if you really want to be up to date just use svn (I think I can write tutorial - how to use svn with Upp and Linux).

Sincerely,
Klugier
