Subject: Project folders recognized & listed in U++ startup list, stay organized

I was curious why some project folders, in my MyApps folder, were not listed in the opening U++ Select Main Package form, while others were listed.
This is a very common practice in IDEs.

From the Packages, Assemblies, and Nests documentation. http://www.ultimatepp.org/appidePackagesAssembliesAndNests$en-us. html
Quote:The package directory contains the package definition file (a plain text file with a .upp extension), which always has the same name as the package directory.

The 'always' means Must.

Hi Edward,

By default, TheIDE only shows "Main packages". Main package means that it has main package configuration (set via corresponding dialg from Project menu) and it usually contains main()/CONSOLE_APP_MAIN/GUI_APP_MAIN method.

Check the select box in lower left corner of the dialog, it allows you to display non-main packages as well and also packages from other nests in the same assembly.

Best regards,
Honza
