How to add
LDFLAGS = -mwindows
within U++

Many thanks

Well, if you want, using mingw, produce gui application, simply add GUI to your main configuration (this will correctly translate to -mwindows on commandline for GCC, but also to proper switch with MSC compiler...).

Alternatively, to put any option to commandline, you can use Package organizer.

Mirek

Is it so difficult to post into appropriate forum?
Is this a C++ code snippet? C++ problem not related to U++?
