That ocurred randomly,it shows "Trying to start listening <other process using the same port>"" even though i changed the default port to the other,it still does`nt work.
Who has seen the problem?

Hi akabee,

Are you sure there is nothing else listening on that port? On Linux you can check with command like this: "netstat -ntlp | grep <port>".

From my experience, the most common cause for this is that I forget about an instance of my program I launched earlier Or that I killed it improperly, so that some of the processes stay active and still listen on the port.

Best regards,
Honza

In fact i reboot the pc but it's still not working
It is very annoying

Have you tried that netstat command I posted? What port number do you use? Note that ports less then 1024 require extra permissions. So if you have a lower port, you would have tu run your application as root.

Honza

i tried, nothing use the port. my port bigger than 8000.
i found if i don't SetIniFile() then the "<other process using the same port>" gone.. but the config in IniFile do nothing with the port.
i will dig in a little deepe...
