Subject: Row color when lost focus.

Hello! How could I change the color of row, when focus is lost?
Default color of focused row is blue. Default color for "unfocused" row is gray(when you choose row and then gridctrl losts focus).
I found FocusColor() method for focused row. But when GridCtrl losts focus, row, which was focused, becomes gray. Is there similar method, but for unfocused row?
Or how I may revert colors to original color of that row?
