Hello,

As maybe some of you notice, We have (I did) created sub page that links our tutorials on single page. Please let me know what do you think about it - all comments welcome!

The site is available here (you can also locate it from the main site menu) - http://www.ultimatepp.org/www$uppweb$Tutorials$en-us.html.

Sincerely,
Klugier

Hello,

In addition to the first announcement. Now all tutorials posses "Table of concepts" which should significantly help you navigate through our tutorials.

Preview:
- Core tutorial
- GUI tutorial

Sincerely,
Klugier

Hi Klugier,

Well organized tutorials now.

Good work.

Hello,

It seems that the problem is with if-frame directly inputed to the .tpp file, which is of course bad way to do this. File opening could destroy such hack or even exporting engine could start working a little bit different. In my opinion we should extend the .tpp engine to allow adding iframe inside the document.

In my opinion the easiest way to fix that problem is to stay with image and add straightforward urls to videos. The minus of that solution is that the user could not watch the video on the side. But, this is definitely better than not video at all. Please let me know what do you think Sergey? If you agree I could fix it in the near future.

Sincerely,
Klugier
